

What courses are available?

Following courses are available under IIRS e-Learning programme using **English & Hindi Language**.

Four (04) months duration:

- Comprehensive certificate course on Remote Sensing and Geo-information Science.

One (01) month duration:

- Certificate course on Fundamentals of Remote Sensing.
- Certificate course on Fundamentals of Photogrammetry and Cartography.
- Certificate course on Fundamentals of Geographical Information System and Global Navigation System.
- Certificate course on Fundamentals of Digital Image Processing.

Eligibility and Course Durations

For learners no minimum qualification is required. However to get a certificate from IIRS following qualification is required:

- Persons who have successfully completed graduation or 3 years diploma after 10th standard or equivalent are eligible. or
- Working professionals with 10+2 educational qualification and minimum 5 years' experience in geo-spatial domain or related areas.

How to register?

Interested participants can register through <http://elearning.iirs.gov.in> or <http://www.iirs.gov.in>

What is the course fee?

The e-Learning courses is available free of cost to all the participants. However to get a certificate from IIRS, the student has to appear in an examination for which a nominal fee will be payable through demand draft as per following:

- For four months certificate- ₹ 10,000/
- For one month course- ₹ 2500/

There is no fee for Government of India sponsored participants.

Background

During last decade the utilization of Internet technology by different user groups in the society is emerged as a technological revaluation which has directly affect the life of human being. The role of internet technology is very important for capacity building in any discipline which can satisfy the needs of maximum users in minimum time.

IIRS has been conducting satellite based outreach program since 2007 with the manifold support from Standing Committee on Training and Education (SC-T) of National Natural Resources Management System. The program has been very popular across the country. We have so far trained over 33,000 participants from 18 courses conducted, representing 470+ institutions/universities. However, this program remained limited to educational institutions that are having EDUSAT Studio setup and high speed internet connectivity within the country.

Why an e-Learning programme?

- This online programme is flexible for anytime, anywhere learning keeping in mind the demands of geographically dispersed audience and their requirements. The programme is comprehensive with variety of online delivery modes with interactive, easy to learn and having a proper blend of concepts and practical to elicit students' full potential. The registered participants of IIRS e-learning programme can access:
- Relevant lecture notes, practical exercises developed for e-learning courses and EDUSAT programme of IIRS.
- Download geo-spatial data from open and free data archive and related services.
- Access to Student thesis and publication archive of IIRS.
- Recorded video of EDUSAT programme for relevant topics.
- Participation in Important lectures conducted at IIRS through live webcasting using NKN.
- Participants are allowed to participate in EDUSAT based interactive classroom. The same registration and Single Sign-on option will be available.
- Interaction with subject expert from IIRS through live Chat and interactive sessions.

The Need:

Remote Sensing and Geoinformation Science have become key technology tools for the collection, storage and analysis of spatially referenced data for resource planning and decision making. Today it is the backbone to many decision-making systems and location-based services emerging in the New Information Economy. Planners and decision makers' that utilize these Geo-spatial technologies for variety of applications in agriculture, forestry, mining, market research, environmental analysis as well as the social, utility services and disaster management.

Course Objectives

- To provide an opportunity for individuals to learn Remote Sensing and Geoinformation Science for the benefit of their professional career. This basic course in Remote Sensing and Geoinformation Science will allow graduates to build their knowledge and practical expertise in RS and GIS technologies with independent study and project experience at the certificate level.
- To provide considerable flexibility allowing students to quickly gain the RS and GIS knowledge and qualification they need today, and to add to their credentials. Students develop a capacity for independent research, problem analysis and solution.
- To empower students undertaking this course to develop their knowledge and understanding through formal coursework and a program of independent reading. It has a practical component and a project associated with it to develop learners' research, analytical and problem-solving skills.
- To undergo Laboratory Practical and Experiments in Cloud Computing Environment

Target Groups

- State and Central Government Ministries and Departments.
- Geospatial Industries.
- PSU/entrepreneurs/NGO.
- Students and Researchers.
